

## 1. Create a Git Repository

- Open GitHub or any Git hosting platform.
  - Click on "**New Repository**".
  - Set the repository name as **2301030400059**.
  - Choose the repository visibility: **public** or **private**, as required.
  - Click on "**Create Repository**".
- 

## 2. Clone the Repository (Optional)

- Copy the repository link provided after creation.
  - Open a terminal or Git Bash.
  - Clone the repository to your local machine using the following commands:
  - ```
git clone https://github.com/divyankthumar/2301030400059
```

```
cd SOU_2301030400059
```
- 

## 3. Create Folders

- Navigate to the cloned repository folder (either locally or directly on the hosting platform).
  - Create two folders named:
    - **Assignment\_1**
    - **Assignment\_2**
  - If working locally, use the following command:

```
mkdir Assignment_1 Assignment_2
```
- 

## 4. Add Assignments to Respective Folders

- Place the respective assignment files inside the folders:
  - **Assignment\_1** folder for the first assignment.

- **Assignment\_2** folder for the second assignment.
- 

## 5. Commit and Push Changes

- If working locally, perform the following steps:

1. **Stage the changes:**

```
git add .
```

2. **Commit the changes:**

```
git commit -m "Added Assignment_1 and Assignment_2 folders with assignments"
```

3. **Push the changes to the remote repository:**

```
git push origin main
```

---

## 6. Document the Steps in a Word File

- Prepare a Word document that includes:
    - Each step performed during the task.
    - Screenshots of key actions (e.g., creating the repository, adding folders, pushing changes).
- 

## 7. Submit the Git Repository Link

- Copy the link to your Git repository:  
<https://github.com/divyankthumar/2301030400059>

Submit it via the Google Form provided at the time of submission.
